

REVOLUTIONARY PARASAILOR SPINNAKER

Those ingenious German engineers are at it again, this time with a new hybrid downwind sail called the Parasailor. The spinnaker combines a symmetrical spinnaker design with an integrated parasailing wing in the top third of the sail. The wing, which hangs in a network of kite strings, stabilizes the sail in gusty conditions while providing lift that will keep the bow from submarining in fast running conditions. The sail can be used from 80 to 180 degrees of apparent wind and in breeze from 5 to 25 knots. Veteran voyager Jimmy Cornell has endorsed the Parasailor for passage making. Each new sail comes with its own spinnaker snuffer, which makes the sail easy to deploy and retrieve. For more information log on to www.parasailorusa.com.
